

The most important service functions of **FRIGODATA XP** are made available through the practical app **Frida**. All the devices connected to the CAN bus are clearly represented in a structured device tree. Parameter sets can be quickly called up using the convenient navigation and adjustable values can be changed.

A demo version is available free of charge in the App Store or Google Play™ Store.

The two following QR Codes enable you to download a demo version of **Frida** quickly and easily.

Frida for iOS®

Frida for Android™

Frida depends of the respective licence and is available in the versions **Frida Service Basic** and **Frida Service Abo**.

Scope of functions **Frida Service Basic**

- Connection established via Bluetooth® Low Energy (BLE), CAN-AP required in the project
- Can create and edit up to 5 projects
- OneID use is required
- No COM/DATA-CENTER

Scope of functions **Frida Service Abo**

- Connection established via BLE and Internet
- Can create and edit unlimited projects
- OneID use is required
- Access to COM-CENTER: enables mobile, secure communication with all LAN-enabled plants
- Access to DATA-CENTER: enables access to all projects while on the go, including the download of all master data and protocols, and a search for nearby plants
- The **Frida Service Abo** version can be used for one year

The respective licences are available at your sales department, the licences will be activated via the security center using the OneID procedure. OneID serves in this case as a licence transfer of the app **Frida**. You can find more details at <https://registeroneid.wurm.de/>.

When your licence has been confirmed by your sales partner you have to restart the app **Frida** or to check in the settings of **Frida** the licence.
